

# Antec Additions

Our spies have put us on to something rather useful in the Antec arena, that something is a new power supply. It's called the Neo HE and it comes in four flavours: 380W, 430W, 500W and 550W. All of them boast extremely quiet operation, up to 20% less power use and being environmentally friendly among their talents. They stay cool too, with a little help from their 80mm internal fan. For those of you worried about the spaghetti situation, they're also equipped with an advanced cable management system to cut down the clutter and improve airflow around the case. The 500 and 550W offerings even have dual PCI-E card connectors! They're going at £65 - £97. Following on from that, they've got a new ATX case for you to put it in: The P150. This little lovely comes in a three-tone brushed aluminium and white finish with blue front LEDs. It's got space for up to three hard drives, a 120mm fan

with speed controller and special polycarbonate sides to keep it nice and quiet. Add to that a cable management channel system, easy-access thumbscrew, a removable (and washable!) air filter and USBs, FireWire and audio ports on the front and it sounds like a winner. It's out now at £125. There's more info at [www.antec.com](http://www.antec.com).
